Abstract

The nappy changing surface (1) is movably mounted on the supporting framework (4) of the baby's bath (5). The nappy changing surfaces (1) underneath frame is formed of two U-shaped brackets (2,3) movably positioned on the underside of the nappy changing surface. The free ends of the flanges (2') of one bracket (2) are linked to the baby's baths supporting framework.

The free ends of the flanges (3') of the second bracket (3) have bends (7) for resting on the top rim of the bathroom bath (6). The bridge piece (2'') of the bracket (2) linked to the child's bath's supporting framework is linked at two points to the underside of the nappy changing surface by means of two attachments (8).

USE/ADVANTAGE - Nappy changing surface can quickly be transformed with min. of effort from being baby's bath.

Dressing table for babies.
